# Speedy Series

Laser Engraving Systems  
Profitability by Design

/ SETTING NEW STANDARDS

# Profitability By Design

The Speedy series of laser engravers will inspire you with their speed, smart features and innovative technical design. For sign makers, graphic artists, schools and universities, creative or industrial users, our world-class solutions provide a true competitive advantage.

Personalisation or customisation creates significant added value for products made of wood, plastic or glass. Laser processing achieves crystal clear cut edges with no additional material processing required on acrylics. Serial numbers on metal parts are permanently marked for traceability. Prototypes can be created from cardboard or MDF. Whether you are starting your business or are wanting to work more efficiently, our laser systems are designed for 24/7 operation and let you work quickly, productively and reliably.

**Speedy 360**  
Highest efficiency  
with the smallest footprint

The "Speedy" has been the fastest laser engraver on the market since its launch in 1999 and continues to set new standards. Its current engraving speed is 4.3 m/second at 5g acceleration. The patented InPack Technology™ guarantees maximum runtime of the axles for reliable production. Full control and flexibility allow bi-directional communication between the laser and software. With a CO<sub>2</sub> and a fiber laser source in one laser machine, the patented Trotec "Speedy Flexx" innovation offers endless application possibilities.

The product line is 100% developed and manufactured in Austria and sold through 17 sales offices, increasing profitability for customers in more than 90 countries. We advise and support our customers. The Trotec Academy offers training on materials and technology, and we make sure that our service and field team are always up to date on their knowledge. Exhaust systems, laser and engraving material, and service products complete our product portfolio. As a manufacturer of high-tech laser systems, Trotec relies on the systematic expansion of its technological advantage, working closely with customers to ensure this is possible.

**Speedy 100**  
Compact laser for demanding entry level users

**Speedy 300**  
Highly productive engraving machine

**Speedy 400**  
Maximum productivity and flexibility

## Personalisation with laser engraving

### Added value for the customer, more profit for the engraver

Products that include a personal dedication are increasing in popularity. An engraver's field of application is very diverse. Companies and end customers can increase their business by expanding their product range. The offer for end customers is as varied as the materials. Whether you are talking about picture frames, wine glasses or pens – a personal dedication with names, text, logos or photos make these types of items very unique. Personalised signs, stamps, medals and trophies, data plates or various types of contract engraving of components can also be a lucrative business for companies, both as individual pieces or in mass production.

Photo engraving on tags and pendants

Personalised gift

Fine engravings on a door sign

Fine geometries with highest precision on paper

Unique designs for wooden jewellery

Stunning details on leather

## Unique items for customers, higher profits for the artisan

Unique, individual and personal – people are putting value on the qualitative and quantitative value of handcraft work today and prefer creative individual items. Customised jewellery, gifts with a personal touch or decorative accessories for interior design are some of the most popular customer requests. Practically any design can be implemented with a laser. With individuality and attention to detail, products or artwork can be quickly and easily created and upgraded with a laser. Whether you are working with wood, glass, acrylic, leather or paper, contact-free material processing with a laser also saves time and money.

Customisation with  
laser engraving

Added value through laser engraving of promotional items

## Economical production and consistent quality

In the promotional merchandise industry, ballpoint pens, USB sticks and bottles are made of various materials such as stainless steel, anodised aluminium or other coated metals. Promotional materials made of wood such as chopping boards, knives or key fobs are also becoming increasingly popular. The goal is always durable, elegant and sustainable lettering. The challenge lies in the fact that the products often differ significantly in material, size, and shape. With a laser machine, permanent and tactile engravings or markings are possible on a wide variety of products, without any cumbersome preparation. Once the laser settings have been stored, the quality of the marking remains consistently the same and post-production is straightforward. Since there are no costs for printing plates or ink, etc., the costs per marking remain consistently low - whether you are producing 1 or 1000 pieces. This means you can offer unbeatable prices on the market and increase your margins.

Logo engraved on fleece jacket

Sustainable and elegant lettering on pens

Durable engraving on bottles and cups

Turn ideas into products in seconds

High precision in model making

Perfect for rapid prototyping

## The ideal tool for prototyping and digital fabrication

FabLabs, Maker Spaces, schools and universities use lasers in model making, industrial design, prototyping and also with many other DIY ideas and across many departments. The incredible and inspirational design possibilities offered by laser technology are also ideal for all types of art and design projects. Laser machines are used here to process a variety of different materials such as MDF, cardboard, or polystyrene. Laser technology gives users complete freedom in the development and implementation of all their ideas. With laser engraving and laser cutting, you can create inspiring designs in just a few process steps.

From idea to product with laser technology

# Endless Application Possibilities

Speedy laser engraving and cutting systems are the universal tool for many materials and applications. Expand your range with new product ideas.

Single pieces, small batches and large series can be produced inexpensively with a laser machine. Speedy lasers are used in many different applications.

Relief engraving on Wood

Laser engraved data plates

Laser engraved anodised aluminium locks

Personalised awards

Crystal clear cut edges on acrylic signs

Photo engraving on acrylic

Personalised glasses with names and designs

Personalise promotional items

Wood and acrylic coaster with interior details

Arts & crafts: Jewellery finishing

Personalised stone including marble or slate

Laser engrave stamp text plates

Refine textiles including microfibre

Engraving materials – laser engrave laminates

# Customer Statements

"The Speedy is a great addition to my creative workflow. The paper I use is so fine, it's difficult to imagine that you could take a layer away from it and that it would still hold together, but that shows how the laser can create fine details."

**Hannah Nunn - Hannah Nunn Ltd.**

"The Trotec laser is an excellent fit for our business. The laser has paid for itself within 6 months of ownership and has allowed us to diversify our business in challenging times. We don't take shortcuts. We pay for high quality technology so that we can pass high quality products onto our customers."

**Gerry McElhinney - Vinehall Displays**

"The quality of Trotec machines coupled with their support network made us fully confident in our purchase. With the two machines we now have greater scope for production and prototyping, saving us both time and money in outsourcing."

**David Hoskins - ABB Ltd.**

"The Trotec laser does not disappoint, the robust build and processing capabilities meaning that the laser continues to produce excellent-quality results even after heavy use, and it's easily adaptable to the wide range of projects demanded of it."

**Mark Calleja - The Raspberry Pi Foundation**

"The Speedy 400 is a great addition to our production capabilities, allowing us to remove the outsourcing requirement and add fine details to our products."

**Mark Maher - Odyssey Studios Ltd.**

"We know that we can depend on Trotec for quality support and I cannot fault our experience."

**Zara Shaw - Wolf and Moon**

"Trotec made the whole process of purchasing a laser cutter easy. The machines are exemplary and have allowed us to maximise our production capabilities and take the business forward while experimenting with other features such as photo engraving. The customer service we have received from Trotec has been perfect from day one."

**Dan Ward - RB1 Ltd.**

"Cutting speeds are now twice as fast, allowing students to get more work done within their allotted time. The quality of laser processing is also superior, making producing models cheaper and quicker for our students, a huge advantage over our previous machines."

**Laura Mason - University of Sheffield (School of Architecture)**

# Impressive Material Diversity

With the Speedy series of laser machines, you can engrave, cut or mark the widest possible range of materials. The palette ranges from glass, plastic or wood, rubber, leather and metals to textiles, cardboard and MDF. Discover the possibilities.

Material	Engraving			Cutting			Marking		
	CO <sub>2</sub>	Fiber	Flexx	CO <sub>2</sub>	Fiber	Flexx	CO <sub>2</sub>	Fiber	Flexx

Foam (PVC free)	CO <sub>2</sub>		Flexx	CO <sub>2</sub>		Flexx			

Please note that certain types of material should not be engraved or cut with a laser because of their chemical make-up. These materials contain dangerous substances that are released during processing in the form of gases and dust, jeopardising both the user and the functioning of the machine. Some of these materials include:

- Inferior leather (Chrome VI)
- Carbon fibres (carbon)
- Polyvinyl chlorides (PVC) including
- PVC based synthetic leather
- Polyvinyl butyral (PVB)
- Polytetrafluoroethylenes (PTFE /Teflon®)
- Beryllias
- Materials containing halogens (e.g. fluorine, chlorine, bromine, iodine and astatine), epoxy or phenolic resins.

Important: Be wary of materials specified as “flame retardant”. This property is achieved through the inclusion of bromine, which is then released during laser processing.

<sup>1</sup> The above metals can also be processed with a CO<sub>2</sub> laser. This requires an additional step and the use of consumables, such as laser marking ink or spray.

<sup>2</sup> Results may vary; subject to qualification due to high variability of material types

# Profitability by Design

Speedy laser engraving and cutting systems are the perfect choice both for entry level users as well as professional engravers. The Speedy is developed to increase your profitability. The ultimate goal of Trotec is to help you find the perfect laser machine to make your business more profitable and successful.

## Productivity by Design

Trotec develops the fastest laser engravers on the market. Time is money – the processing time per laser job is crucial for the success of your business. Increase your production capacity with an engraving speed of 4.3 m/s and 5 g and a laser power of up to 120 watts. Thanks to the OptiMotion™ motion control, cutting jobs are up to 8 times faster than comparable laser machines on the market.

The patented CeramiCore® laser source technology provides assurance with reliability, engraving quality and longevity. Thanks to the InPack Technology™, all sensitive components of the laser engraving machine, such as lenses, mirrors and motors, are protected against dust.

## Flexibility by Design

The special feature of the patented Flexx Technology™ is that every conceivable CO<sub>2</sub> laser application, as well as annealing and metal engraving, can be realised in no time. The addition of a fibre laser source offers even more possibilities for laser marking metals and plastics. Depending on the material, the two laser sources (CO<sub>2</sub> and fiber) are activated alternately – in one job, without manually changing the laser tube, lens or focus.

The multi-functional table concept allows the ideal table to be selected and easily switched depending on your application. This ensures optimum processing quality and productivity. Use the modular concept to build a lasery system specific to your needs, choosing different lenses or other options such as the pass-through or rotary engraving attachment.

## Usability by Design

Speedy laser engraving machines are equipped with the most powerful laser software. Work in your usual graphics program and simply send your jobs to the laser using a printer driver. A suitable exhaust system ensures the safe and clean operation of your laser machine.

Focusing is automated at the touch of a button thanks to the patented SonarTechnology™. With the dynamic status display and easy view of 100% of the work area, the status of the laser and processing progress can be seen directly on the machine, thus avoiding unnecessary downtime. Thanks to the ergonomic access, the processing table and materials can be inserted quickly and easily, without straining your back.

Productivity  
By Design

trotec

## Fastest laser machine on the market

Optimised to achieve the highest quality results at even higher speeds, the Speedy 400 is the fastest and most productive mid-size laser engraver in the industry. This model produces high-quality results even at its maximum engraving speed of 4.3 meters per second.

Maximum cutting speed at best cutting quality – this is what OptiMotion™ motion control, the new innovative Trotec path planning system, stands for. The Speedy 400 cuts up to eight times faster than comparable laser machines on the market. Using OptiMotion™, the cutting speed and acceleration are calculated and optimised in real-time based on the geometry. OptiMotion™ delivers high quality in curves and maximum throughput.

## Optimised Working Area

All platforms are optimised for standard material sizes. Save time and money on cutting, use more standard blanks per table, and use the entire working area.

**Trotec Speedy 400** 100% finished

**Competitor 1** 44% finished

**Competitor 2** 15% finished

## Longer service life, lower maintenance requirements

With InPack Technology™, we were the first manufacturer in the world to design a self-contained axes design and put it into practice. It perfectly protects both lens and mirrors, electronics, motors and axes from dust and other disruptive factors. The advantages:

- Ensures trouble-free work over an extremely long period of time
- Exceptionally low maintenance and cleaning costs, thus low operating costs even with very intensive use
- Even higher productivity

## Reliability, the highest engraving quality and longevity

Trotec laser systems are equipped with laser sources from the American OEM manufacturer Iradion. The patented CeramiCore® laser source technology impresses with its reliability, engraving quality and longevity. Highlights: The resonator of the laser source (i.e. the point at which the laser radiation is generated) is 100% ceramic.

Ceramic lasers can be operated at much higher pressure, resulting in better and faster pulsability, which in turn is crucial for high speed engraving and marking. Laser users will therefore benefit from the highest engraving quality.

## More laser power – double productivity

However, productivity is not only a question of low operating costs, but also of high laser power. The equation is: More power equals more quality, efficiency and thus more profit. This formula applies to virtually all laser engraving and cutting applications. Compare for yourself! Therefore our advice is: When buying your Speedy, it is better to opt for a more powerful laser from the beginning. Or replace the old laser with a stronger model. It pays off!

Cutting: acrylic letters, cut with 80 watts or 120 watts

Laser power: 80 watts  
Process: 65 % completed  
Time per piece: 29 seconds

Laser power: 120 watts  
Process: 100 % completed  
Time per piece: 29 seconds

Engraving: anodised aluminium type plate, engraved with 30 watts or 80 watts

Laser power: 30 watts  
Process: 48 % completed  
Time per piece: 55 seconds

Laser power: 80 watts  
Process: 100 % completed  
Time per piece: 55 seconds

# Flexibility By Design

Revenue-generating options and features

## Endless application options

The patented Flexx Technology™ integrates two laser sources – CO<sub>2</sub> and fibre – in one machine, allowing a variety of different materials to be processed in one operation. The CO<sub>2</sub> laser source is ideal for engraving and cutting plastic, wood, rubber, leather and many other materials. The fibre laser is the right tool for marking metals and achieving colour change on plastics.

The characteristic feature of the patented flexx function: Depending on the material, the two laser sources are activated alternately – in one job, without manually changing the laser tube, lens or focus. The laser sources are easily assigned at the touch of button in the software. Every conceivable CO<sub>2</sub> laser application, as well as annealing marking or metal engraving, can be realised in no time. Time savings and flexibility in everyday work are thus guaranteed. Your product offering can be quickly and easily expanded.

Every laser engraving machine in the Speedy series is “ready for flexx”, this means that every Speedy can be retro-fitted with an additional laser source. This ensures that you are prepared for the future. Retrofit whenever you are ready.

## Rotary engraving made easy

With the rotary attachment, you can engrave conical, cylindrical and spherical objects such as glasses, cups, vases and bottles in various sizes and diameters. When a rotary attachment is used, a rotating movement replaces the axis movement in Y direction. A special roller attachment allows machining of objects with large or small openings that do not fit into the cones of the standard configuration.

## Eight focus lenses for perfect results

As a rule of thumb, the following applies to the focus lenses: The more detailed the graphics, the shorter the focal length in laser engraving. The thicker the material to be laser-cut, the greater the focal length should be. For this reason, Trotec offers you eight different lenses for perfect results.

## Engraving bulky parts

Full flexibility also means being able to work on work pieces that are larger than the machine. With its pass-through hatch option, Speedy lasers can do this with ease\*. The pass-through option allows you to process very long and bulky work pieces such as doors, wall panels made of wood or large plates. (Please note that the hatch makes the Speedy a laser safety class 4 device.) \*Speedy 360/400 only

# Flexibility By Design

## Multifunctional table concept

The multifunctional table concept allows optimal configuration for all engraving and cutting applications. Depending on the application, the ideal table can be selected and changed easily and quickly for the highest processing quality and productivity.

### Aluminium grid table

The robust universal cutting table offers high stability and is particularly suitable for cutting tasks. It is especially suited for parts that are smaller than 100 mm, because they remain flat in position after the cutting.

### Vacuum table

The vacuum table fixes the material on the working area by means of a negative pressure. The advantages: precise focusing over the entire area, even better engraving results and very efficient handling, since no manual fixing is necessary. The vacuum table is the ideal choice for thin and lightweight materials (paper, foils, eg.) that can be challenging to place in a flat position against the surface.

### Cutting table with aluminium- and acrylic slats

The cutting table with aluminium and acrylic slats is mainly used for cutting thicker materials (8 mm thickness) and for parts wider than 100 mm. The number of supporting points can be reduced by removing some of them individually, depending on the job.

### Acrylic grid table

The acrylic grid table prevents back reflections during cutting, making it the best choice for working on acrylic, laminates, plastic films and parts smaller than 100 mm. Each processed piece remains flat in position after cutting.

### Ferromagnetic engraving table

Thanks to the ferromagnetic construction, you can easily fix thin materials such as paper or foils with magnets. In addition, an absolutely flat working area ensures optimum results in laser engraving and laser marking.

### Honeycomb cutting support

The honeycomb cutting support is versatile and suited for varied applications, for example, when cutting paper and foils. Please note we recommend using the honeycomb cutting support in combination with the vacuum table.

# Usability By Design

Swift loading and unloading  
More ergonomics

Unlike some lasers on the market, the Speedy 360 and Speedy 400 were designed without the front bar or struts to provide easy and ergonomic access to the work area. This ergonomic design makes loading and unloading (especially large or heavy parts, or a rotary attachment) much easier. It also minimises the physical effort required from the operator, because loading and unloading of work tables and materials is done at hip height, and the front cover can be folded down completely to minimise back strain.

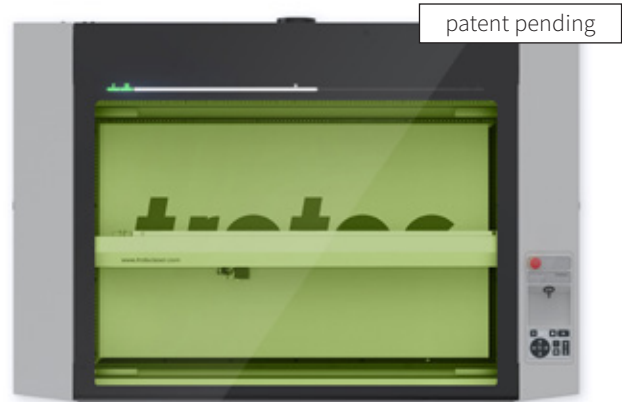

## Automatic focusing with Sonar Technology™

Correct adjustment of the focus, i.e. the correct distance between the laser head of the Trotec laser system and the material to be processed, is crucial for a perfect application result. The patented SonarTechnology™ is the simplest method for digital focusing on the workpiece surface. It determines this distance extremely precisely and efficiently at each position on the work table. At the touch of a button, the ultrasonic sensor on the laser head detects the surface of the workpiece to find the focus point, and the working table automatically moves into the correct focus position.

## Laser status is detected quickly

With the new dynamic status display, the status of the laser and its job progress are visible directly on the machine. This makes it easy to see at a glance whether the laser is switched on, a job has been completed or stopped, which laser source is activated etc. Unnecessary idle time can be avoided, saving time and money.

## Inside view

Trotec laser machines are equipped with a transparent top cover, allowing you to monitor your laser engraving job at any time during processing, and no matter where your work piece is positioned, without lifting the lid. The transparent lid provides a view of the entire cabinet of the laser machine. The design also includes LED lighting, which illuminates the working area. This convenient feature improves operator comfort and convenience.

# Usability By Design

Trotec Ruby®. Laser Software re-defined.

Makes working with your laser simpler and faster. Digital to the core.

What does every laser user need today and in the future? A laser software that makes your daily work with the laser run seamlessly. A simple and fast workflow from idea to product. A platform that guarantees profitable order processing. A setup which is connected, web-based and digital to the core. A user interface that delights. This is what Trotec Ruby stands for. Our vision: To re-define working with the laser and offer all laser users unprecedented added value.

Graphic design software for the laser. For a seamless workflow.

Create graphic, photo and text elements. Adjustments can be made quickly with the integrated workflow. Switch between the “design” and “prepare” steps at any time in one software that is both a graphics and laser program. With all the graphic tools the laser user needs. The laser software Ruby® allows direct file import from pdf, svg, png etc. When importing, faulty files are automatically cleaned. These functionalities reduce the time from the idea to the finished product by half. No costs for additional software packages.

Connected working. Multiple lasers, infinite number of users, one web-based platform.

Trotec Ruby® connects all your laser machines in a network, locally or in the cloud. Jobs can be distributed to multiple machines from a PC or Mac. Jobs are loaded onto the laser machine’s integrated memory and processed without an additional PC. Thanks to the new workflow, jobs can be prepared by one user and produced by another at any time and from anywhere. Ruby® breaks new ground with this integrated, splittable workflow, different roles and rights in user management. Complete automation of business processes is possible with the open programming interface – the Ruby® API.

A user interface that delights.

The Trotec Ruby® laser software accompanies the user from the idea to the finished product. The seamless workflow starts with the design and continues through preparation and production. An integrated guide provides additional tips if required. The training effort is minimal. The cloud-based material database guarantees the best laser results. The user selects the material and material effects such as deep engraving, dark engraving or kiss-cut right from the start. Trotec Ruby® provides the right material parameters.

# Usability By Design

JobControl® laser software

Simply intuitive. Work efficiently.

Our JobControl® software program was developed to be easy to use and highly efficient. It includes multiple performance-related features and intuitive user friendliness. Whether you are a beginner or an experienced user, Trotec JobControl® facilitates your daily work with the laser and supports you with perfect results.

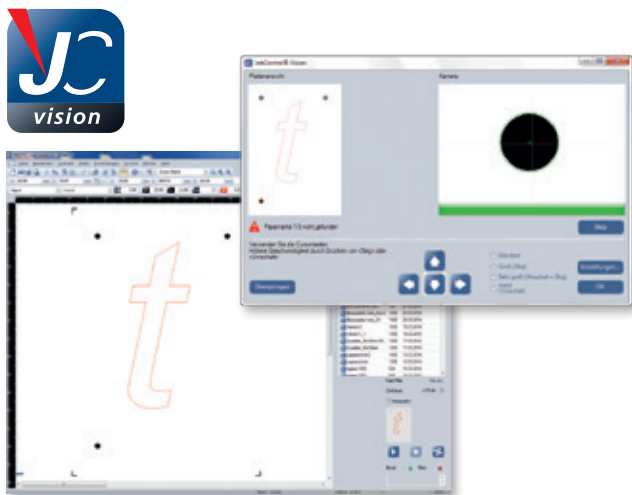

## As easy as printing

JobControl® software is a tool that allows every user to immediately control all laser functions thanks to its extremely easy operation. Our laser software allows fast and efficient working in familiar graphics or Windows® program environment, for example with Corel Draw®, Adobe Illustrator®, Photoshop®, AutoCAD®, InkScape®, etc. Similar to printing, the user simply sends the finished graphics to the laser via the special Trotec printer driver. At the touch of a button, the machine begins to engrave or cut, the inserted material with the stored settings, and you are done!

## As productive as you are

In addition to straightforward usability, JobControl® offers a variety of intelligent features that make your success even more likely. For example, bi-directional communication, the JobTime Calculator, markers, vector sorting, job preview and a number of others:

- The material database provides parameters for over 50 different materials to choose from. Any new materials can be added quickly and easily.
- Process types stored in the printer driver simplify everyday work by automatically optimising graphically required processes.
- In addition, JobControl® can be further customised and adapted to your needs with advanced settings.

## JobControl® Vision

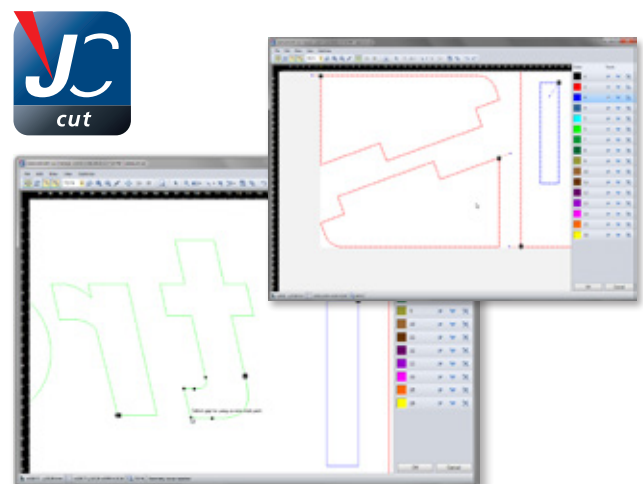

### Precise laser cutting of printed materials

Create amazing details and meet tightest tolerances with Trotec JobControl® Vision. The Vision module uses registration marks to determine the position and rotation of printed sheet material on the working area of the laser. The system detects print distortions and adjusts the cutting path dynamically to match the artwork, whether flexible or rigid materials. This speeds up your production and costly miscuts can be avoided. This guarantees a perfectly cut end product.

## JobControl® Cut

### JobControl® integrated optimisation of basic cutting jobs

JobControl® Cut is a tailor-made, fully integrated solution in our Trotec laser software. It enables you to easily process and optimise cutting geometries without changing the original geometries in the graphical software again. Only in a few steps colour orders are changed, cutting gaps automatically filled, start points defined, the fitting accuracy of components secured, lead-ins and lead-outs defined as well as the processing time optimised. All for a perfect cutting result.

A man with short dark hair and a beard, wearing a maroon sweater and dark blue trousers, stands in a modern industrial or showroom environment. He is holding a stack of five material samples: a red sheet, a blue sheet, a light-colored wood-grain sheet, a white sheet, and a dark grey sheet. In the background, a large industrial machine is visible, with the text "Speedy 400 flex" and "trotec" partially visible on its side. The lighting is bright and even, highlighting the man and the materials.

# Trotec Laser & Engraving Materials

## The ideal material for each application!

Trotec offers solutions for almost all requirements in the field of engraving, cutting and marking. High-quality, innovative laser system solutions as well as premium quality consumables form this outstanding portfolio. We aim to assist our customers to improve profitability and productivity by supplying Trotec materials which offer superior results first time. Our additional services such as our in-house 'cut to size' service and make us a one-stop-shop, allowing our clients to purchase all their products via one call or email.

We are proud to manufacture a full range of Trotec laminates as well as offer high-quality products from specially selected suppliers. We want to make you more profitable by benefiting from these advantages:

- Engrave efficiently with fewer passes
- Little residue created while engraving
- Minimal cleaning required
- No sticky edges after laser cutting
- Consistency in quality and colours
- Highly durable materials

“While we use a number of suppliers for sheet materials, the most consistent in terms of quality and stock availability is Trotec. Stock is delivered next-day according to our specifications which includes cutting sheets to size, meaning there are no production delays.”

**Toby Fletcher - Origin Designed Ltd, United Kingdom**

Better environments  
with Atmos exhaust  
systems

## Clean

The efficient and thorough filtration of dust, gas and odours extends the service life of your laser system and guarantees a clean and healthy working environment for every user.

## Intelligent

For many years, Trotec has been working on creating optimal co-ordination of laser and extraction systems. The result is a host of intelligent features. For example, operation via membrane keyboard, the FlowControl Technology, and a control function via the laser software.

## Economical

A good extraction solution improves the engraving and cutting results. Low maintenance costs are guaranteed thanks to sophisticated filter solutions. Due to the bi-directional laser communication, the extraction is only activated when it is necessary. Thus, the laser optics are optimally protected and the filter service life is maximised. Your advantage: Thanks to Trotec Service from a single source, the Atmos exhaust system is maintained together with your laser.

Trotec is also setting new standards with regard to exhaust systems with the Atmos series. We produce models that are optimally adapted to the respective laser machine. A suitable exhaust system ensures the safe and clean operation of your laser machine. It reliably removes dust and gases from the processing area and, with its activated carbon filters, it filters out odours that may be generated during laser processing. The Atmos exhaust system helps to deliver the best possible engraving and cutting quality.

## Atmos Cube

Forms a single unit with the laser machine and simultaneously functions as a support frame, for applications with low levels of dust

## Atmos Mono

Stand-alone version with a turbine for applications with medium levels of dust generation. The Atmos Mono Plus version is available for particularly odour-intensive applications

## Atmos Duo Plus

Stand-alone version with two turbines for double the performance in demanding applications.

## Atmos Nano

Particularly compact and easy to transport, ideal for fibre laser applications with particularly small dust particles and minimal odour

## Atmos Pre-Filter

The use of an automatically cleaned pre-filter system is recommended if there is a large quantity of dust to be filtered. This is positioned between the laser machine and the exhaust system. If particularly tenacious particles are produced (e.g. when processing acrylic), the pre-filter can also be equipped with an optional additive dosage unit.

# Trotec: Setting New Standards Globally and in the UK

Trotec is a world leader in laser technology headquartered in Austria and part of the Trodat Trotec Holding. With innovative concepts and products, we have succeeded again and again in setting new standards ever since the company was founded in 1997. Whether in terms of quality, new developments or service, we get the same result: enthusiastic customers around the world.

Trotec's consistent commitment to customer support is the reason for the company's global success, as well as one of the central drivers of motivation and innovation globally. At Trotec, being close to the customer is not just an abstract value but a practised reality.

That's why we employ over 50 people in the UK, including a network of highly skilled technical service engineers, applications specialists and customer service advisors.

We have six showrooms across the UK and Ireland and our knowledgeable and experienced sales team are always on hand to provide advice and assistance.

Trotec is present in 18 countries with 68 demo rooms for laser product demonstrations. Overall, with 113 distribution partners we serve customers in over 90 countries.

# Speedy Portfolio Overview

This overview of the Speedy portfolio should assist you in identifying the differences between the individual laser systems. You can find exact technical details in the data sheets for the respective products.

	<b>Speedy 400 CO<sub>2</sub></b>	<b>Flexx</b>
Working area (W x D)	1016 x 610 mm	1016 x 610 mm
Max. height <sup>1</sup> of workpiece	305 mm	283 mm
Loading area (W x D)	1096 x 698 mm	1096 x 698 mm
Overall dimensions (W x D x H)	1428 x 952 x 1050 mm	1428 x 952 x 1050 mm
Max. processing speed	4.3 m/s	4.3 m/s
Max. acceleration	50 m/s <sup>2</sup>	50 m/s <sup>2</sup>
Technology motion system	Brushless DC servo motors	Brushless DC servo motors
Laser power CO <sub>2</sub>	60 - 120 W	60 - 120 W
Laser power fibre		20 - 50 W
Laser class	2	2
Weight <sup>2</sup>	310 kg	350 kg
Power consumption	1~230V / 50/60Hz / 10.2 A 1~115V / 50/60Hz / 15.3 A	1~230V / 50/60Hz / 10.2 A 1~115V / 50/60Hz / 15.3 A
