

AUTOMATED ONLINE PROOFING

WITH THE PDF REVIEW MODULE

- ✓ **No more struggling with emailing PDFs**
The PDF file is uploaded to a web server and a link is sent to your customer. Saving low-resolution versions for email is eliminated.
- ✓ **Accurate PDF viewing**
No need to worry about overprint settings or variations in user's PDF viewers. The PDF Review Module guarantees accurate viewing of the file as it is intended is to print.
- ✓ **No software needed for viewing**
The interface is browser-based and the PDF file is available to the user at their convenience.
- ✓ **No user management whatsoever**
The PDF Review Module generates a unique URL that is sent via email. Your end-user only needs to click the link in the email to access the proof and inspect the PDF.

AUTOMATED ONLINE PROOFING

Using the Switch PDF Review Module

The Enfocus online proofing software removes manual touches from creating, sending, and receiving PDF proofs.

It allows your production team to concentrate on getting jobs to press.

By speeding up the proofing cycle, it helps you to provide much better service to your customers.

KEY FEATURES IN VERSION 2.0

Multiple PDF files in a single link

- A single email with a single link works with multiple PDF files to be approved, instead of sending one email per PDF.
- This means multiple files can be handled as a group, instead of independently, which makes a more user-friendly experience.

Support for multiple brands

- Multiple brands can now be used within the PDF Review module interface, automatically.

Reader spreads view

- Allows two pages to be displayed as reader spreads.
- This means the alignment of objects on the two pages can be accurately viewed and checked.

Display the preflight report

- Enables the customer to easily see issues with a PDF, the customer is shown the elements or areas

that could cause issues. Customers view the actual production PDF, with preflight data layered over it. Keep approved files for a defined time

- Files can be viewed later, after they have been approved or rejected using the original link.
- This means proofs can be rechecked, and reviewed in the event of a dispute.

Option to rotate view

- Enables the approval view to be rotated to easily check content.

Speed up the approval process

- Unnecessary file transfer time and bandwidth usage is eliminated.

Support for password protected PDFs

- Provides an extra level of security for customers worried about data protection and confidentiality.

Email encryption and authentication

- More compatibility with email servers.
